## FEEDING GUIDELINES

It is recommended that a veterinarian's opinion be sought before use or before extending the period of use. A transition period when starting the diet is advised and for an efficient weight loss or ideal weight maintenance, the recommended daily energy intake should not be exceeded. Recommended length of time: until target body weight is achieved and after if required to maintain target bodyweight. 1 pouch = 20g of Feline OM S<sub>T</sub>/O<sub>x</sub> Obesity Management™ dry.

The suggested daily food intake for weight loss is **based on the cat's starting weight**, average caloric requirements and a desired safe weight **loss of 1% body weight per week**. Daily food intake must be adjusted according to response, generally every 4 weeks. PURINA® PRO PLAN® VETERINARY DIETS OM S<sub>T</sub>/O<sub>x</sub> Obesity Management™ must be fed until target **Body Condition Score (BCS)** is achieved. Feline OM S<sub>T</sub>/O<sub>x</sub> Obesity Management can be fed long-term for cats prone to gain weight using the maintenance feeding quantities.
